American cities face stubbornly large racial disparities in infant mortality, preterm and low birthweight births along with unacceptable rates of maternal mortality. The Los Angeles Maternity Assessment Management Access and Service (MAMA) program is an innovative, multi-sector initiative that seeks to address the constellation of social factors that contribute to adverse maternal and infant outcomes, including housing instability, food insecurity, untreated mental health conditions, domestic violence, and substance abuse. A research team led by Los Angeles County will test the effectiveness of the program's four major components: (1) a health home care management model, (2) peer and community support, (3) flexible funding for non-medical services, and (4) an advanced health information technology platform. The team will partner with the University of Southern California Children's Data Network, Public Health Foundation Enterprises, and the county offices for child protection and probation to conduct the study.

CC-20191120

Using data to tackle social determinants of health

Wednesday, November 20, 2019

3-4pm

Provider: Cleveland Clinic + League

Across the country, public health researchers and insurers are sizing up the disparities in population health based on geography. The truth is that your zip code could have more impact on your health than your genetic code.

Join Dr. Michael Roizen, Chief Wellness Officer at Cleveland Clinic - the # 2 ranked hospital nationally, and Mike Serbinis, CEO and Founder of League Inc., North America's leading enterprise health OS, as they share their experience, the latest research, and feedback from the front lines. They will explore how you can address these challenges in your organization.

What you will learn:

- How social determinants of health can have a major impact on your employees' health
- Why the traditional health risk assessment isn't cutting it
- How tech + modern health assessment approach is delivering better health outcomes
- Insights into what employers can expect from offering a modern health assessment approach
- Help employers forecast future health costs

Reg2PHTC-L2L201912

Writing for the Public, The Building Bridges Approach

Tuesday, December 3, 2019

12-1pm

Provider: Region 2 Public Health Training Center

[To view the live webinar, please register here](#)

To view the webinar recording at a later date, Enroll in the LMS course:

Join the Region 2 Public Health Training Center for their December Log-in2Learn live webinar.

Participants will learn concrete strategies for writing to the public, based in the building BRIDGES approach developed by Anne Marie Liebel, Ed.D. President, Health Communication Partners LLC

After the webinar, participants will be able to:

- Describe the rhetorical triangle and its components, and how it can be used to analyze communication
- Identify assumptions you have about your audience and how these influence your writing
- Construct an empathy map to help focus your writing

As hospitals and clinics increase screenings for social determinants of health (SDOH), referrals to agencies that provide services to address these needs also will increase. However, questions remain about the ability of nonprofits and other “community resources” to absorb these increased referrals for services. Using secondary data analysis, a review of existing capacity assessment models, and case studies of human service centers in Florida and Texas, researchers will develop and implement an approach for assessing the capacity of community social services organizations and their partners to absorb and meet the needs of referred clients. Findings will lead to improvements in understanding the nonprofit sector’s ability to respond to growing demand, ultimately contributing to the long-term goal of strengthening cross-sector partnerships and integration of services and systems to improve health outcomes.
